CHAPTER V

CONCLUSION

This chapter presents the conclusion and it is ended by the suggestion from the researcher.

A. Conclusion

By considering the aspects and indicator of assessment rubric to analyze the students’ ability to write logical reasoning on Schoology’s comment, the conclusion of the research result can be determined as follow:

1. **The students’ ability to write logical reasoning as reflected on students’ opinion on Schoology’s comment**

   The conclusion of the students’ ability to write logical reasoning as reflected on students’ opinion on Schoology’s comment in CALL 2 course are; the students who joined CALL 2 course have ability to write a well-stated thesis statement, contains well-defined and thorough explanation of topic, the students address the topic sentence, and also include the critical aspects about the topic. Besides that, almost all of the students’ opinion are logical and thoughtful, the students used specific links, concrete and detailed examples, and also relevant evidences to support their opinion. The students’ reasoning is easy to follow and
understandable by the readers because the students used simple sentences and familiar words in their writing. But, almost students do not write the concluding statement in the end of their writing. Whereas, the criteria of conclusion in the highest score according to the researcher’s assessment rubric are the conclusion summarize the key points without repeating previous sentences, underscore the importance of the opinion, and ends with appropriate concluding sentence. But, the result of the students’ writing conclusion did not effectively capture opinion. The last is students’ ability in writing response, a half the number of students who joined CALL 2 course is only respond with minimal effort such as said “good job” or said “thanks”, that comment cannot build the students’ critical thinking. This is happened because almost students log in to Schoology two or one days before the deadline. So, the students do not have much time to give comment or to discuss about the issues on Schoology.

B. Suggestion

Regarding the result of this research, this suggestion is for the lecturer. The lecturer should give feedback to the students’ opinion on Schoology’s comment and discusses it with the students about the mistake that the students have. For other researchers who plan to conduct a research related to this
study, the researchers are suggested to conduct new study with different elements of this study such as: how often the students participated in giving comment in online discussion or the difficulties that faced by the students in online learning.
