CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the writer presents the conclusion and suggestion which dealing with the findings of the analysis in chapter four. It presents the summary of the findings which is the writer discussed in the previous chapter and the suggestions for the readers.

5.1 Conclusion

In this chapter, the writer presents the use of comprehension disturbance or schizophrenia speech used by the main character of “A Beautiful Mind” movie as the important aspect in understanding and knowing about schizophrenic speech. People who have schizophrenia always have differences with another disease or illness in which the people who have schizophrenia or schizophrenic not only have disturbance on their mental, but also they have impaired in their speech or language comprehension.

This research finds the comprehension disturbance or schizophrenia speech used by John Nash as a main character in A Beautiful Mind movie such as: poverty of speech, poverty of content of speech, pressure of speech, distractible speech, tangentiality, derailment, incoherence, illogicality, clanging, neologism, word approximations, circumstantiality, loss of goal, perseveration, echolalia, blocking, stilted speech, self-reference and the addition according Ginsberg theory they are flight of ideas and irrelevant answer.
From the analysis above, the writer concluded that derailment, flight of ideas and incoherence are mostly used, it is shown when the character in the movie can not to relate the word of his speech.

5.2 Suggestion

Comprehension disturbance is part of psycholinguistics study that the topic has been researched by many writers before. In this research, comprehension disturbance becomes phenomena in schizophrenic’s language or speech, which are interesting for the writer to be discussed since it gives more understanding for all the readers to know the type of each utterance which uttered by the people who have schizophrenia disease.

After doing this research, the writer hopes that the readers can more understand more about comprehension disturbance which part of psycholinguistics study. Here the writer can not found the other types of schizophrenia speech or comprehension disturbance which used by the main character such as poverty of speech, poverty of content of speech, pressure of speech, distractible speech, tangentiality, illogicality, clanging, neologism, word approximations, loss of goal, echolalia, stilted speech, self-reference. And it is suggested to the next readers who interest on this topic to investigate more completely and deeply with another context as the object of analysis by using the same theory.

From this research, the writer finds that the people with schizophrenia disease has comprehension disturbance which is influenced by their delusion and hallucination.
